Abstract

The repeater comprises only one preparatory branch (5) with a first reversing unit (7) before it, and a second reversing unit (9) after the output (5b) of the branch, having amplifier (13), filter (15) and mixers. The reversing units are alternately switched, so that in one position, the first unit, operating as a receiver, is connected to the input of the branch, with the second unit operating as a transmitter connected to its output, and in a second position, the second unit, operating as a receiver, is connected to the input of the branch, with the first unit in transmission mode connected to its output.
